

Platform Convey System Filter Kit

To anyone who has cleaned the hydraulic system of a Commander® loader due to a failed convey motor, few other jobs are as frustrating or time consuming. A single worn motor – if not replaced in a timely fashion – can fail and flood the hydraulic system with metal shavings and other contaminants. This wreaks havoc with hydraulic functions, taking untold labor hours and expense to repair – as well as rendering your loader out of service for days.

That's why we now offer an "insurance policy" to help protect you from the aftereffects of such a failure – we call it our **Platform Convey System Filter Kit**. Inexpensive and easy to install this filter kit will capture particles released into the hydraulic system in the event of a platform motor breakdown – saving you time and money.
