

Platform Convey System Filter Kit

To anyone who has cleaned the hydraulic system of a Commander loader due to a failed convey motor, few other jobs are as frustrating or time consuming. A single worn motor - if not replaced in a timely fashion - can fail and flood the hydraulic system with metal shavings and other contaminants. This wreaks havoc with hydraulic functions, taking untold labor-hours and expense to repair - as well as rendering your loader out of service for days.

That's why we now offer an "insurance policy" to protect you from the after effects of such a failure - we call it our **Platform Convey**

System Filter kit. Inexpensive and easy to install, this filter kit will capture particles released into the hydraulic system in the event of a platform convey motor breakdown - saving you time and money.
